

Welcome to the FAANG Senior Software Engineer Data Structures & Algorithms Handbook! This system is engineered specifically to transition your thinking from basic tutorial code to production-grade engineering and live interview mastery.

MAP CORE CURRICULUM ARCHITECTURE

- 1. Arrays, Strings & Hashing
- 2. Two Pointers
- 3. Sliding Window
- 4. Binary Search
- 5. Stack & Queues
- 6. Linked Lists
- 7. Trees & Binary Search Trees
- 8. Heap & Priority Queue
- 9. Graphs (BFS / DFS / Topological)
- 10. Dynamic Programming

 THE 5-STAGE FAANG INTERVIEW PLAYBOOK

1. Clarify edge cases & inputs.
2. State brute-force solution & complexity.
3. Propose optimal pattern & trade-offs.
4. Code cleanly with variable names.
5. Dry-run trace step-by-step with sample test cases.

 GETTING STARTED

Use the  **Index** button on any page to return to the Master Dashboard, toggle Dark Mode for late-night review, or click  **PDF** to export clean A4 printable documents!
